

### Model output and classification

Class 0	Class 1	Class 2
0.8	0.15	0.05
0.2	0.3	0.5
0.2	0.6	0.2
0.1	0.8	0.1

The models ouput an array with probabilities for each class.

### Model output and classification

Class 0	Class 1	Class 2	Pred
0.8	0.15	0.05	0
0.2	0.3	0.5	2
0.2	0.6	0.2	1
0.1	0.8	0.1	1

The prediction is the class with the highest probability

### **Confusion Matrix**

#### **Predicted**

		0	1	2	3
Actual	0	Correct	Incorrect	Incorrect	Incorrect
	1	Incorrect	Correct	Incorrect	Incorrect
Real/	2	Incorrect	Incorrect	Correct	Incorrect
Rec	3	Incorrect	Incorrect	Incorrect	Correct

- In the diagonal: correctly classified observations
- Sum of diagonal: # of correctly classified observations
- Outside diagonal: incorrectly classified observations
- Sum of matrix: total # of observations
- We can't speak of positive and negative class any more.
- Now we talk about classes, referencing each class.
- One or more classes can be the minority class or classes.

# Accuracy in multiclass

#### **Predicted**

	0	1	2	3
0	5	1	1	1
1	0	4	1	2
2	0	1	2	0
3	1	0	0	1

$$Accuracy = \frac{Number\ of\ correct\ predictions}{Total\ number\ of\ predictions}$$

- > Correctly classified = 12
- Total observations = 20
- $\triangleright$  Accuracy = 12 / 20 \* 100 = 60%
